

Recording your results

A short description (1-2 sentences) of the approach you took to your testing.

- For this exercise, I should check if the new feature is able to perform the function it was designed for, if it supports multiple scenarios, the performance and usability is acceptable and lastly, record any potential bugs.

A list of test scenarios you executed to conduct testing the feature.

1. Verify that upload CV button is enabled/clickable
2. Verify that the option to prefill is visible to the user
3. Verify that a loader is displayed when CV/resume is being uploaded
4. Verify that the upload transaction can be cancelled by the user
5. Verify that the uploaded CV/resume can be deleted by the user
6. Verify that the details prefilled in the profile is correct, when prefill option was selected
7. Verify that the fields other than Experience and Qualification are not overwritten, when prefill option was selected
8. Verify that the user can reupload a CV/resume
9. Verify that the CV/resume file name that was uploaded by the user should be displayed after the upload transaction
10. Verify that a "Success" message is displayed when a CV/resume is uploaded
11. Verify that an "Error" message is displayed when an incorrect file type is being uploaded
12. Verify that the user will not be able to upload multiple files
13. Verify that the feature is working in different browser
14. Verify the upload speed if acceptable to the user
15. Verify that the user will still be able to redirect to another option after receiving an error message

A short description of bugs you may have encountered.

- Commenced and Completed fields in Qualifications page does not display the date format as suggested (MM/YYYY) for input values for month of January (01) to September (09)

If you can think of other areas for your testing before deploying the feature, what would they be?

- Test if the file has a content of a CV i.e. name, qualifications. It should not accept a blank document.
- Test the file size accepted for a CV/Resume
- The feature should display the exact filename uploaded by the user for usability (for enhancement?)
- The feature should suggest what are the accepted file types for usability (for enhancement?)

Notes

You can also consider the negative scenarios to conduct your testing. Add them on your list or separate them from the happy path. It depends on your approach.

It is possible to not find a bug. We want to understand more how you manage your testing.
